Market Innovation
batimet KIT

By Professionals for Professionals: The batimet Wood-Aluminium Façade KIT

The batimet KIT includes:

- + Pre-engineered wood system profiles
- + Aluminium system profiles, fully assembled
- + Factory-fitted ETA-certified connectors

With these three elements from the batimet KIT, you are fully equipped with all the components you need to assemble the curtain wall system.

More Sales, New Customers

What is the batimet wood-aluminium façade KIT?

The batimet wood-aluminium façade KIT is a prefabricated system package for wood-aluminium mullion-transom façades, designed for easy on-site assembly. With this system, you retain greater control over fabrication, keep more project margin in-house and increase your profit.

What advantages does the batimet KIT offer me?

If you have not yet benefited from the high-end wood-aluminium façade market, this is your chance: with the batimet KIT, it is easy for you to position yourself as an expert in this profitable field. We support you with a sophisticated, high-quality system, quick quotes and convincing technical documentation for your customers.

Zero Investment, Huge Potential

You do NOT need any special tools! NO investment is required!

The batimet KIT is completely prefabricated. This ensures high returns, as you need less time for assembly and can complete projects faster and more efficiently.

How can I increase my profits even further?

You keep the glazing margin in-house: you order the batimet wood-aluminium façade KIT without glazing (except for the tested EI30 fire protection façade). This allows you to maximise your share of the value added and your profit.
